

## MTH6157 Survival Models

### Week 2 exercises using R

1. Survival is modelled using the Exponential Model with a constant force of mortality of 0.00027
  - a. Calculate  ${}_2p_{46}$
  - b. Calculate  ${}_3q_{56}$

```
> mu = 0.00027
```

```
> t = 2
```

```
> p = exp(-mu*t)
```

```
> p
```

```
[1] 0.9994601
```

```
> s = 3
```

```
> q = 1 - exp(-mu*s)
```

```
> q
```

```
[1] 0.000809672
```

2. Mortality for a group of people in their 70's and 80's is to be estimated using Gompertz Law with the force of mortality given by

$$\mu_x = (0.0037)1.054^x$$

- a. Calculate  $\mu_x$  for  $x = 70, 71, \dots, 89$  using basic R functionality
- b. Plot a graph of the force of mortality under this model
- c. Hence calculate  ${}_5p_x$  for  $x = 70, 75$  and  $80$  in two different ways:
  - i. using basic R functionality
  - ii. using the `flexsurv` package functionality

(a)

```
> x <- c(70:89)
```

```
> x
```

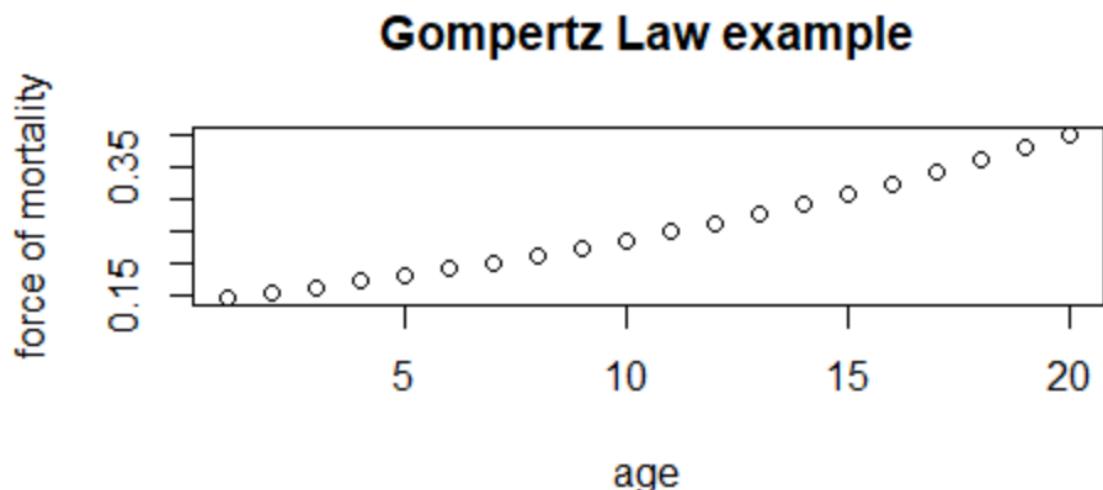

```
[1] 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84
```

```
[16] 85 86 87 88 89
```

```
> mu_x <- 0.0037*(1.054^x)  
  
> mu_x  
[1] 0.1469077 0.1548407 0.1632021 0.1720150  
[5] 0.1813038 0.1910942 0.2014133 0.2122896  
[9] 0.2237533 0.2358359 0.2485711 0.2619939  
[13] 0.2761416 0.2910532 0.3067701 0.3233357  
[17] 0.3407958 0.3591988 0.3785955 0.3990397
```

(b)

```
> plot(mu_x, xlab = "age", ylab = "force of mortality", main = "Gompertz Law example")
```

(c)

```
> library(flexsurv)  
  
> shape = log(1.054)  
  
> rate = 0.0037  
  
> shape  
[1] 0.05259245  
  
> rate
```

```
[1] 0.0037  
  
> hgompertz(x, shape, rate)  
[1] 0.1469077 0.1548407 0.1632021 0.1720150  
[5] 0.1813038 0.1910942 0.2014133 0.2122896  
[9] 0.2237533 0.2358359 0.2485711 0.2619939  
[13] 0.2761416 0.2910532 0.3067701 0.3233357  
[17] 0.3407958 0.3591988 0.3785955 0.3990397  
  
> p5 <- 1 - pgompertz(x, shape, rate)  
  
> p5  
[1] 0.0656793828 0.0564833358 0.0481808148  
[4] 0.0407473574 0.0341503315 0.0283496926  
[7] 0.0232989350 0.0189462089 0.0152355674  
[10] 0.0121082981 0.0095042904 0.0073633842  
[13] 0.0056266481 0.0042375354 0.0031428783  
[16] 0.0022936828 0.0016457061 0.0011598061  
[19] 0.0008020701 0.0005437382
```

so

5p70 = 0.0656793828

5p75 = 0.0341503315

5p80 = 0.0095042904
