From Information to Effectiveness

In the 1990s, the field of information visualization began to take center stage. The need for meaningful data representation was evident, as companies faced the challenge of managing and understanding large amounts of data. Visualizations were developed to help users make sense of complex information, allowing for better decision-making and communication.

Cinema expanded

As technology advanced, so did the possibilities for visual storytelling. The 1990s saw the rise of digital cinema, which offered a new level of detail and realism in film production. This technology was not only used for feature films but also for commercials, which became increasingly popular due to their ability to engage audiences with dynamic and immersive experiences.
