

What is PebblePad?

PebblePad is the platform MBBS students will use to complete their e-portfolios, such as the portfolio for their General Practice placements. Here, students will find the pre-created portfolio with all the requirements they need to complete.

As part of their portfolios, students must complete and attach pre-created forms, such as Case Based Discussions, prescription forms, and end-of-placement forms. Some of these forms require the input and signature of a clinician.

Students are responsible for ensuring that these forms are completed and signed in a timely manner. They are asked to approach the clinician and hand them their devices with the relevant form.

Using the student's device, clinicians can complete the required fields and sign the form digitally using the touch screen. The form will be locked once it has been signed, so students cannot modify their content.
