

Module Title: Beyond Language: Multimodality in Theory and Practice

Module Code: LIN6202

Credit Value: 15

Level: 6

Pre-requisite modules:

Content Description

Comic books, computer games, playground interactions, and emoji-filled instant messages all highlight the fact that communication involves much more than language. Gestures, positioning in space, and forms of embodied communication carry meaning-making potential alongside spoken and written language. This module explores the interplay of language with other semiotic modes and contexts that play a role in meaning-making. Students analyse print media materials, electronic communication, and video-recorded interactions applying social semiotic, discourse analytic and multimodal interaction analytic perspectives. They also use the acquired knowledge creatively to construct effective multimodal material.

Module Aims

Academic Content

- analyse multimodal texts from the social semiotic, discourse analytic and interaction analytic perspective
- review the types of modes employed in communication, discuss their criteria and affordances
- discuss the social aspect of multimodal communication in multicultural contexts
- locate multimodal discourse analysis within the wider context of research areas, such as anthropology, sociology and mediated discourse analysis, interactional sociolinguistics, pragmatics and conversation analysis

Disciplinary Skills

- understand of the basic techniques of data analysis relevant to multimodal discourse analysis and interaction analysis
- ask theoretically and empirically motivated questions about language structure and use in relation to other semiotic modes of expression within a text
- demonstrate the ability to apply theory to practice through a design of effective multimodal text
- develop presentation skills using current technology, including poster or website design

Attributes

- ability to critically engage with existing literature and evaluate its applicability to a new and unfamiliar context
- effective communication through a range of media and technologies and with a range of audiences
- independent and team learning skills necessary to continue professional development in a changing world
